More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AABA981285 represent sequences used in the

The present amino acid sequence is the hRUP7, an endogenous human orphan CC G protein-coupled receptor (GPCR). The full length hRUP7 CDNA was cloned CC by RT-PCR using human peripheral leucocyte cDNA as template. The orphan CC GPCR of the invention, like all GPCRs has seven transmembrane alpha CC helices with an extracellular N-terminus and an intracellular C-terminus. CC However, no endogenous ligands has yet been identified for the proteins CC of the invention. The orphan GPCRs may be used in the identification of CC their endogenous ligands, and to screen potential GPCR agonists and CC used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid CC encoding human orphan GPCRs may be used for tissue localisation CC expression analysis to provide information about their function in CC healthy and pathological states
                                                                                                                                                                                                                                                                                                                                                                                                                                   01-OCT-1999;

                   This is a human G-protein coupled receptor (GPCR)-like polypeptide, PFI-013, encoded by cDNA of NCIMB 41073. The PFI-013 protein can be expressed by standard recombinant methodology. Antibodies and modulators of PFI-013 are useful in the manufacture of a medicament for treating allergic disorder, including extrinsic asthma, immunological disorders, such as intrinsic asthma, vasculitic granulomatous disease, interstitial and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease and neoplastic and myeloproliferative diseases. They are also useful for treating obesity, diabetes, metabolic, neurological diseases, psychotherapeutics, urogenital disease, reproduction and sexual medicine, inflammation, cancer, tissue repair, dermatology, photoageing, skin pigmentation, osteoporosis, cardiovascular, gastrointestinal diseases, allergy and respiratory disease, sensory organ disorders, sleep disorders and hair loss. The PFI-013 protein and nucleic acid are useful in the diagnosis and treatment of the above conditions and also for screening drug candidates for the treatment of diseases associated with signal transduction. The antibodies are also useful for enrichment of essinophils from mammalian, especially human blood and for detecting the protein in biological samples

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of the human G protein-coupled receptor protein BG36, which shows significant homology with histamine H3, with activity of binding to histamine and capable of changing intracellular cAMP concentration in response to its stimulus. The protein is applicable as a tool in screening ligands or drug candidates for regulating signal transduction from such protein and treating diseases associated with its
                       histamine H3 receptor homologue; infection; viral; bacterial; funga protozoan; HIV-1; HIV-2; pain; cancer; diabetes; obesity; anorexia; bulimia; osteoporosis; asthma; allergy; urinary retention; acute heart failure; hypotension; hypertension; angina pectoris;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               response to candidates.

cc and variants. Like all G protein-coupled receptors, AUGN35 liagnelles compression vectors and is involved in signal transduction. AVGR35 has for putative transmembrane domains and is involved in signal transduction. AVGR35 has compression of AVGR35 has for putative expression vectors and host cells comprising AXGR35 has for expression of AXGR35, and to an AXGR35 specific antibody. AXGR35 proteins compression axGR35, and to an AXGR35 specific antibody. AXGR35 proteins compression of AXGR35, and to an AXGR35 specific antibody. AXGR35 proteins compression axGR35 proteins compression axGR35 proteins compression of AXGR35 proteins compression and collections and to an AXGR35 specific antibody. AXGR35 proteins compression and collections particularly compression accurately compression and collections; pain, cancers, benign prostatic hypertrophy; compression accurately compression, and proteons; asthma; asthma; allergies; compression; accurate heart failure; hypotension; hypertension; angina compression, depression, stroke; ulcers; migraine; vomiting; psychotic and neurological disorders such as anxiety, schizophrenia, compression, and depression, delirium, dementia, and severe mental compression; and dyskinesias, such as parkinson's disease, Huntington's compression and compression and axGR35 proteins and compression axGR35 proteins ax
asthmatic lung. AXOR35 proteins, nucleotides and antibodies are also useful for diagnosing or determining susceptibility of an individual to disease via the detection of abnormal levels of protein or mRNA, or via the detection of mutations in the corresponding gene. AXOR35 proteins at also useful for inducing an immunological response in a mammal against the above diseases, and for antibody production. AXOR35 nucleotides are also useful as diagnostic reagents, in chromosome localisation and tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              psychotic disorder; neurological disorder; anxiety; schizophrenia; manic depression; bipolar disorder; depression; delirium; dementia; severe mental retardation; dyskinesia; Parkinson's disease; Huntington's disease; diles de la Tourette's syndrome; lymphocyte; macrophage; eosinophil; neutrophil; function modulation; autoimmune disorder; pulmonary disorder; gene therapy; vaccine;
                                                   expression studies, and for producing transgenic animals useful in discovery. AXOR35-specific antibodies are useful for purifying the protein or fragments thereof, and are also useful for treating concassociated with the expression of the AXOR35 protein. The present sequence represents human AXOR35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel G-protein coupled receptor polypeptide and polynucleotide for treating cancer, autoimmune, pulmonary, cardiovascular and neurological disorders and for identifying modulators useful for treating asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  02-NOV-1999; 99US-00431898

```
CC 2067, to antibodies specific for nGPCR-2067, to drug screening methods

CC that use nGPCR-2067, and to modulators of nGPCR-2067 activity. nGPCR-2067

CC nucleic acid sequences may be used to isolate nGPCR-2067 allelic variants

CC and species homologues and may also be used in genetic mapping. The

CC invention also discloses the use of nGPCR-2067 nucleic acids in screening

CC for a predisposition to nGPCR-2067-associated hereditary mental

CC disorders, or for the diagnosis of these disorders. nGPCR-2067 nucleic

CC acids may additionally be used to generate transgenic animals, including

CC knockout animals, which may provide an insight into treating a variety of

CC molecules for suppressing expression of nGPCR-2067 in cells. nGPCR-2067,

CC and nGPCR-2067 modulators may be used to treat a wide variety of medical

CC conditions, particularly mental disorders, central nervous system

CC diseases, and metabolic diseases. Diseases that may be treated include

CC viral infections, particularly HIV-1 or HIV-2 infections; pain; central

CC disease, schizophrenia, migraine, depression, anxiety, bipolar disorder,

CC disease, schizophrenia, migraine, depression, anxiety, bipolar disorder,

CC disease, such as cancers, benign prostatic hypertrophy and psortiasis;

CC metabolic disorders such as diabetes, dyslipidaemia, obesity, and

CC mypertension, thromosels, inflammatory conditions; autoimmune disorders (e.g.,

rheumatoid arthritis); hormonal disorders, and renal failure

Like all GPCRs, nGPCR-2067 has 7 putative transmembrane domains and is involved in signal transduction. The invention also relates to expression vectors and host cells comprising nucleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-2061 acids encoding nGPCR-2067.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                  chromatography, in immunoassay of histamine receptor, to identify cDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis
                                                                                                                                                                                                                                                             This sequence represents the amino acid sequence of a human histamir receptor (HR) designated SP9144. The sequence was isolated by search databases with the sequence of known G-coupled protein receptor (GCI The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           useful for disorders.

The polypeptide is useful for identifying an agonist or antagonist of a mammalian histamine receptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polynucleotide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infection, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, inosicol phosphate and mitogen activated protein (MAP) kinase), changes in cellular growth rate, secretion of hormones, receptor-stimulated Ca2+mobilization, mitogenic effects, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC The present sequence is that of a human histamine receptor of the H4 CC subtype, as predicted from a cDNA clone isolated from a bone marrow cDNA CC library. The invention provides mammalian (human, mouse, rat and guinea CC pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and CC polypeptides (see AAM50564-67). The nucleic acids have been expressed in CC recombinant host cells that produce active recombinant protein. The CC pharmacology of known histamine ligands is demonstrated. Mammalian CC diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying CC modulators of the human histamine H4 receptor. Such modulators may be confilammation, cardiovascular and cerebrovascular disorders, non-insulin CC disorders of the neuroendocrine system, stress and spasticity

                 The invention provides an isolated histamine receptor, H4, which binds CC ligands comprising inidazole attached to amine by an alkyl chain. The H4 CC receptor can be expressed by standard recombinant methodology. Cells CC expressing H4 receptor protein at a detectable level can suppress cyclic can denosine monophosphate (cAMP) formation when contacted with the H4 CC receptor agonist. The H4 receptor and antibodies are used for identifying CC H4 receptor modulators. Modulation of histamine H4 receptors is useful CC for treating transplanted organ rejection, asthma, allergies and CC autoimmnue pathologies such as multiple sclerosis, type I diabetes, CC rheumatoid arthritis, cognitive and memory defects. The h4 receptor protein and nucleic acids are useful targets to identify drugs that are CC processes. Identification and isolation of H4 receptor provides for CC development of screening of molecules that interact with H4 receptors. CC Genetic variants of H4 can be used to diagnose an H4 associated disease as described above. The H4 receptor polymucleotide is useful to treat or prevent a disorder associated with the function of H4 in peripheral blood of lateract with the peripheral blood contents of the harmony hears and a looker associated with the function of H4 in peripheral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Histamine receptor; H4; antirheumatic; antiarthritic; immunosuppressive; antiasthmatic; antiallergic; neuroprotective; antidiabetic; human; cerebroprotective; cAMP modulator; gene therapy.

New G-protein coupled receptor polypeptides, useful for identifying modulators of signal transduction for treating kidney disease, hyperlipidemia, obesity, dysiexia and cardiac myxoma.

26; Page 61; 78pp; English.

CC The present invention relates to a new G-protein coupled receptor (GPCR)
CC polypeptide comprising greater than 70% amino acid sequence identity to
CC the amino acid sequence of human GPCRs TGR62, TGR213.1, TGR130.2,
CC human TGR213 or TGR92, 80% amino acid sequence identity to mouse TGR18 or
CC 90% amino acid sequence identity to human novel edg receptor protein, as
CC defined in the specification. The GPCR covalently linked to a solid phase
CC is useful for identifying a compound that modulates signal transduction.
CC The identified compounds are useful for treating kidney disease, cerebral
CC cavernous malformations, hyperlipidemia, obesity, dyslexia and cardiac
CC myxoma. The molecules of the invention are useful for disgnosing
CC disorders or conditions such as kidney-related conditions or diseases
CC urinary abnormalities, renal tubule defects, hypertension and
CC urinary abnormalities, renal tubule defects, hypertension and
CC infiltrations, lesions, functional disease or condition e.g. cirrhosis,
CC infiltrations, lesions, functional disorders and jaundice and spleenCC associated disorders or conditions e.g. splenic enlargement, immune
CC disorders, blood disorders and others. Modulation of the polypeptide of
CC the invention is useful to treat or prevent any of the above conditions
CC or diseases. The present amino acid sequence represents the human GPCR
CC TGR62 protein of the invention. This sequence is one of seven novel G
CC protein coupled receptors of the invention (AAU74904-AAU74911)

Novel isolated G-protein coupled receptor polypeptide, AXOR: treating infections, gastrointestinal disorders, autoimmune urological diseases, cardiovascular diseases and cancer. AXOR35, disorders, useful for

Claim 1; Page 22; 24pp; English

The invention relates to an isolated G-protein coupled receptor CC polypeptide, AXOR35, (and its homologues and variants) and its encoding CC polynucleotide (and its homologues, variants, complements and RNA CC equivalents). Also included are an anti-AXOR35 antibody, an AXOR35 (expression vector, producing a recombinant host cell by introducing the vector into a cell such that the host cell produces AXOR35, a membrane of CC vector into a cell such that the host cell produces AXOR35, a membrane of CC lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue, by administering to the patient AXOR35 agnists or antagonists or antagonist or antagonist identified is useful for treating a disease such as asthmat, or for inhibiting or promoting the function of lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue, by administering to the patient AXOR35 agnists or antagonists. The CC agonist or antagonist or neutrophils in diseased tissue such as sthmatic lung. AXOR35 or polymucleotide is useful in diagnostic assays, cc for identifying compounds that are agonists or antagonists of AXOR35, as vaccines, or for treating infections (bacterial, fungal, protozoan or CC viral infections), transplant rejection, gastrointestinal disorders (such as gastribed bowel syndrome, vomiting, inflammation (such as Trohn's disease), critiable bowel syndrome, vomiting, inflammation (such as acopic cardiovascular diseases (such as urinary retention), pypotension, CC disease), cough, renal diseases (such as urinary retention), pypotension, cc disease), cancexia, anxiety, schropic obstructive pulmonary disease), cancer, obesity, stroke, septic shock, graft cresus host disease and osteoporosis. The present sequence represents

CC Also included are a plasmid comprising a vector and one of the cDNAs CC above and a host cell comprising the plasmid. The GPCRS are useful for CC the direct identification of candidate compounds as inverse agonists, CC agonists or partial agonists. In vitro and in vivo systems incorporating CC GPCRs is useful for elucidating and understanding the roles these CC receptors play in the human condition, both normal and diseased, as well CC as understanding the signalling cascade. The cDNAs are useful for making a CC understanding the signalling cascade. The cDNAs are useful for making a CC identification of the expression of the receptor in tissue samples. The CC probe for dot-blot analysis against tissue mRNA and/or RT-PCR CC identification of the expression of the receptor in tissue samples. The

                                                                                                                                  The present invention describes antigenic peptides (I) comprising: (a) CC any one of 1601 sequences (see ABB82019) to ABP83619) of 12-24 amino CC acids. Also described: (1) an assay for the detection of a particular GC aride. Also described: (1) an assay for the detection of a particular GC and (2) an isolated antibody having high specificity and high affinity or CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in CC antibody against a particular GPCR, and in the production of specific presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs are useful for detecting the CC presence or absence of corresponding GPCRs. The antigenic peptides for CC treating immune-related diseases, growth-related diseases, cell CC effects and antibodies are also useful for describe for CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, CC atherosclerosis, bacterial, fungal, protozoan or viral infections. CC atherosclerosis, bacterial, fungal, protozoan or viral infections. CC disease, parkinson's disease, multiple sclerosis, pain, sporiasis, CC anxiety, depression, schizophrenia, dementia, mental retardation, memory CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, CC any other disorder in which GPCRs are involved. The antibodies may be CC used in immunoassays and immunodiagnosis. ABZ42523 to ABZ4253 encode CC GPCR proteins given in ABP81675 to ABP82018, which are used in the cCC exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                             The invention relates to splice variants of human H4 histamine receptor H4b and H4C. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4C is useful for treating inflammation, asthma, allery, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel
                                                                                                                                                                                                                                                                                                                                                       Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                                                                                         Example; Page 58-60; 31pp; English.

alpha-1-adrenergic receptor - golden hamster

()Species: Mesocricetus auratus (golden hamster)

()Date: 22-Uan-1993 #sequence_revision 22-Uan-1993 #text_change 09-Uul-2004

()Accession: A40491

R;Cotecchia, S.; Schwinn, D.A.; Randall, R.R.; Lefkowitz; R.J.; Caron, M.G.; Kobilka, B.

Proc. Natl. Acad. Sci. U.S.A. 85, 7159-7163, 1988

A;Title: Molecular cloning and expression of the cDNA for the hamster alpha-1-adrenergic A;Reference number: A40491; MUID:89017157; PMID:2845398

A;Accession: A40491
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A;Residues: 1-515 <COT>
